# Create a page that uses a table

In this exercise, you'll create a page that uses a table to present a list of products. When you're through, the page should look similar to this:

Specifications

- To create the product list page, you can copy the index.html file you worked on in exercise 7 to the products folder. Then, you can delete the content from the main section and modify the URLs on the page as necessary.

- Modify the horizontal navigation menu so it indicates that the product list page is the current page.

- Add a table to the section with a caption, a header, and a body as shown above. Be sure to merge the rows in the first column for each category so the category name is displayed only in the first row.

- Code the description for each product as a link to the page for that product. You can use any names you want for these product pages, but the pages should be stored in the products folder. (The exception is the page for the deranged cat, which should be named cat.html as indicated in exercise 11.)
