# Create a page that uses a form

In this exercise, you'll create a page that includes a form for joining an email list. In addition, you'll create a page that's displayed when the form is submitted. When you're through, the pages should look similar to this:

Specifications for the email form

- Create a new page named email.html in the root folder for the project. Then, copy the code for the basic page elements, as well as for the header, footer, and sidebar, from the page for exercise 7.

- Modify the horizontal navigation menu so it indicates that the email page is the current page.
